

DESIGN 2

By using 2 Weatherproof Enclosures with DVR, Fiber Modem and power, 8 cameras are capable of watching the Yard itself. All the data runs from one enclosure to the other (better line of sight) via a trenched Fiber Cable. Data is then sent wirelessly to the main building and the wireless receiver and translated to be sent via CAT5 to the main DVR/CMS set up. The 6 cameras on the side of the building are hard wired to the central DVR/CMS.
